BULLETIN

BULLETIN #100417A: DISCONTINUATION ANNOUNCEMENT FOR PTAC HEAT PUMP 9,000 AND 12,000 BTU/H MODELS (208-230V)

Distribution Products

LG Heat Pump 208-230V 9,000 and 12,000 Btu/h units have been redesigned with a new compressor for improved supply chain management. These new models will serve as a direct replacement of the current 9,000 and 12,000 Btu/h models.

The current 9,000 and 12,000 Btu/h models will be discontinued after existing inventory has been depleted. Any back orders will be satisfied by supplying the new PTAC models. Pricing on the new PTAC models will be consistent with the current PTACs.

A follow up bulletin will be published when new models are launched and available for ordering. The new 9,000 and 12,000 Btu/h PTACs are expected to go live in the order system in late October.

Should you have any questions, please contact your local LG salesperson.

What is the timing for model discontinuation?

End of Life Models - Current PTAC Heat Pump Inventory:

LP093HDUC - Out of stock
